PROFESSIONAL SUMMARY

Software Engineering graduate, now pursuing an M.Sc in Computer Science and Engineering, focused on backend and data engineering. Hands-on experience building production-style systems using Python, FastAPI, Django, and PostgreSQL, across the full pipeline — data ingestion and cleaning, API design, containerized deployment, and analytics dashboards. Foundational knowledge of supervised learning and model evaluation using Pandas, NumPy, and Scikit-learn. Looking to contribute to backend or data engineering teams building scalable, real-world systems.

TECHNICAL SKILLS

Languages: Python, Java, SQL, Dart, C

Backend & Frameworks: FastAPI, Django, REST API Development

Mobile Development: Flutter

Databases: PostgreSQL, MySQL, SQLAlchemy

Tools & Platforms: Docker, Docker Compose, Git, GitHub, Linux, Firebase, VS Code, pytest

AI & Machine Learning: Supervised learning, data preprocessing, model evaluation, NumPy, Pandas, Scikit-learn

Core Concepts: DBMS, OOP, HTTP Fundamentals, Data Structures and Algorithms, Agile, Scrum

PROJECTS

FinTech Transaction Analytics Pipeline | [Github](#) | [Live Demo](#)

- Built an end-to-end ETL pipeline in Python processing 50,000+ transaction records using vectorized processing and batched, idempotent PostgreSQL inserts, making the pipeline safe to re-run on overlapping data.
- Designed a FastAPI backend exposing analytics endpoints backed by raw SQLAlchemy text() aggregate queries, containerized with Docker Compose alongside a PostgreSQL instance.
- Implemented rule-based fraud detection (high-value outliers, repeat failures, duplicate pattern sequences) with a suspicious_reason column for rule-level attribution.
- Built a Streamlit dashboard for live filtering by channel and status across KPIs, daily trends, and merchant leaderboards; covered the pipeline and API with pytest.

BakiFlow — Receivables Intelligence for SMEs | [Github](#) | [Live Demo](#)

- Architected a service-oriented Django monolith with QuerySet-level multi-tenancy, isolating data cleanly across multiple business accounts on shared infrastructure.
- Built a FIFO-based ledger system using atomic database transactions and CreditEvent audit logging to guarantee financial data integrity under concurrent updates.
- Designed an intelligence layer that computes a Payment Reliability Score per customer and ranks overdue accounts in a Collection Priority Queue, helping SMEs focus collections effort where it matters most.

Vantage Scanner — QR & Barcode Scanner App | [Github](#)

- Developed a Flutter mobile application with a Django backend for real-time, high-performance QR and barcode detection.
- Engineered a MySQL database schema optimized to handle thousands of concurrent user scan histories.
- Built secure REST API endpoints for seamless, real-time sync between the mobile frontend and backend services.

EXPERIENCE

Graphic Design Intern — Youth School for Social Entrepreneurs (YSSE)

Mar 2023 – Aug 2023

- Managed the end-to-end lifecycle of 50+ digital design projects, ensuring adherence to timelines and cross-functional requirements.
- Standardized digital asset workflows, improving team collaboration and accessibility for marketing teams.
- Certificate available upon request.

EDUCATION

M.Sc in Computer Science and Engineering — Daffodil International University

Aug 2026 – Expected Dec 2027

B.Sc. in Software Engineering — Daffodil International University

Jan 2022 – Dec 2025

- Relevant Coursework: Data Structures and Algorithms, Database Management Systems, Object-Oriented Programming, Artificial Intelligence, Machine Learning, Web Engineering, Software Engineering

LEADERSHIP & ACTIVITIES

- Joint General Secretary, Dinajpur Students Association of DIU
- Organizing Executive, Software Engineering Club of DIU (2022–2023) — helped organize technical sessions and project showcases for club members
- Presented technical projects before faculty and peers
